	1.	For t	ıse wi	th a r	network	c transcei	ver having	a deco	der	and
an	encode	er, a	contr	coller	that	controls	operating	modes	of	the
net	work t	ransce	eiver,	compr	rising	:				

an encoder portion operable to direct said encoder to encode data in one of an industry-compliant mode and a custom mode; and

a decoder portion operable, in response to sensing data received in said custom mode at said decoder, to direct:

said decoder to decode said received data in said custom mode and

said encoder portion to direct said encoder to encode data in said custom mode.

2. The controller for use with a network transceiver as recited in Claim 1 further comprising a state machine that includes at least two alternate states indicating whether said custom mode is enabled.

PATENT

20. The network transceiver as recited in Claim 18 wherein at
least said decoder portion is embodied in a peripheral card that is
couplable to the computer system to allow the computer system to
process said decoded data.

- 21. The network transceiver as recited in Claim 18 wherein said controller further comprises a reset portion that is operable to direct said controller to reset said operating mode of the network transceiver to said industry-compliant mode.
- 22. The network transceiver as recited in Claim 21 wherein said reset portion is associated with said decoder portion and operates to direct said decoder portion to direct:

said decoder to decode said received data in said industry-compliant mode; and

said encoder portion to direct said encoder to encode data in said industry-compliant mode.

1

2

3

5

- 23. The network transceiver as recited in Claim 18 wherein said decoder portion is further operable, in response to sensing data received in said industry-compliant mode at said decoder, to direct said decoder to decode said received data from said industry-compliant mode.
- 24. The network transceiver as recited in Claim 23 wherein said decoder portion is further operable to direct said encoder portion to control data transmission from said encoder in said industry-compliant mode.
- 25. The network transceiver as recited in Claim 18 wherein said industry-compliant mode is compliant with IEEE 802.3ab.

PATENT

1	26. For use with a computer system having a network
2	transceiver, a method of operating said network transceiver to
3	allow operating modes thereof to be monitored and controlled, said
4	method comprising the steps of:
5	sensing data received at a decoder associated with said
6	network transceiver in one of an industry-compliant mode and a

network transceiver in one of an industry-compliant mode and a custom mode; and encoding data to be transmitted by said network

transceiver in response to sensing data received at said decoder in said custom mode.

- The method of operating the network transceiver as recited in Claim 26 further comprising the step of decoding data in response to sensing data received at said decoder in said custom mode.
- The method of operating the network transceiver as 1 2 recited in Claim 26 further comprising the step of encoding data in said industry-compliant mode. 3
